

"It is refreshing to find a company so receptive and not in the least defensive – it genuinely feels they want to work with their customers to make the system as good as it can possibly be."

Jenny Bannerman, Head of HR

Simplify Employment

Future Biogas Limited

Jenny Bannerman, Head of HR

After attending the Croner employment law update in March, and having been impressed with the event and speakers, Jenny Bannerman, Head of HR at Future Biogas Limited, made the decision to transition her HR system to Croner Simplify.

How We've Helped

"The main attraction for me was the HR support, template documents, and more," explains Jenny.

"So far, our main contact has been with our account manager and the implementation team, and we have felt supported throughout the process, unlike with our previous provider.

"We have had many queries and have very high expectations for the system, but we have found everyone to be incredibly receptive to feedback and keen to help in any way they can.

"It is refreshing to find a company so receptive and not in the least defensive. It genuinely feels like they want to work with their customers to make the system as good as it can possibly be."

Croner's employment law advisors are renowned and knowledgeable professionals in their fields, and all Croner Simplify users are able to take benefit from expert business advice.

Croner employment and health & safety teams are on hand 24/7, 365 days a year. During office hours, Simplify clients also have access to commercial legal, tax, VAT and payroll advice.

"We have contacted the employment consultants a couple of times for advice and have found them to be friendly, supportive and knowledgeable," says Jenny.

"Every single person we have dealt with at Croner has been professional, friendly, down to earth and customer focused.

"We have provided so much feedback based on experience of other systems, and this has been so well received we truly believe that everyone at Croner is motivated to provide the absolute best support and system that they can."

Established in 2008, Future Biogas is at the forefront of the anaerobic digestion industry. As a highly experienced developer and operator of AD plants across the UK, Future Biogas is able to provide full service capabilities of development, construction, operations, ongoing compliance and asset management to its own projects and those of third parties.
